

A young boy with short dark hair, wearing a red and blue plaid shirt and blue shorts, is sitting on the floor. He is smiling and brushing his teeth with a red and orange toothbrush. The background shows a light-colored wall with some faint markings and a dark object, possibly a chair or table leg, behind him. The overall scene is brightly lit, suggesting an outdoor or well-lit indoor setting.

eVeltio SIFS

"It's education that's meant to take us into this future that we can't grasp."

— Sir Ken Robinson

Working Towards Better Schools

We are averse to template-thinking.

Think of it as 'respecting' a problem, for what it is, rather than applying a solution of a recently solved similar problem.

When learning requirements are unique, the solution should be too!

A learning solution is driven by learning requirements and then optimised for technology, platform, features, and revenue, rather than the other way round. Technology doesn't solve problems; people do. Technology helps people solve problems. As a specialist education consulting firm, we realise that at the heart of every challenge you face, is a set of learning and business requirements that drives the success of a solution. This is especially true when you need to create long-term, sustainable, and future-ready learning programmes.

eVeltio brings its expertise to bear to create custom solutions and implementation plans for improving the design, development, and delivery of education and learning. Through our experience and expertise, we work with you to develop practical and relevant solutions to make education better.

eVeltio works in areas of improvement to:

- ▶ Design better learning processes and help reduce inefficiencies
- ▶ Create long-term sustainable education and learning programmes
- ▶ Develop community-specific strategies for performance and skill development
- ▶ Design and implement creative learning and assessment strategies

Veltiosi is Greek, for improvement.

eVeltio brings the best of strategies, process and technology to education to enable improvement in the design, development, and delivery of education and learning programmes.

Strategic Improvement Framework for Schools

The eVeltio SIFS (Strategic Improvement Framework for Schools) is designed to enable learning institutions to define and implement a long-term and a sustainable approach for continuous improvement for delivery of learning through efficient processes and workflow. This adaptive framework may be customised for institutions with their specific mission, vision and goals.

The SIFS helps institutions implement a holistic initiative that is aligned with an institution's vision and mission and is vendor-independent. The primary objective of this approach is to empower the institution and the key stakeholders to understand the key factors that influence the use of processes, workflow, and technology in the classroom in a way that it strategically benefits the institution and tactically benefits the teacher and the student.

SIFS Features

When engaging with a school with SIFS, eVeltio considers the following aspects to ensure the success of SIFS:

Legacy Protection

SIFS looks at the current infrastructure, and other resources available in the institution and works to leverage available assets.

Sustainability

SIFS will consider ways and means to develop sustainable avenues to keep long-term costs low and make the institution independent of vendor engagement.

Practicality & Relevance

The best solution for one institution may not be the best for another. SIFS ensures that solutions are practical and relevant to the institution's specific needs.

Future-proofing

Consideration of open-technologies and flexible processes ensures that any changes are incorporated smoothly in existing systems.

Reusability

From a resource as well as a business perspective, SIFS looks at the best way to extract maximum benefit from available resources.

Community Engagement

SIFS will recommend ways to actively engage with the community to develop a vibrant and learning culture within the institution.

Why SIFS?

SIFS has been designed specifically for institutions that are looking to improve delivery of education in a manner that suits its goals and vision. The SIFS approach has several benefits:

Customised

The SIFS framework is designed in a way that it can be customised for every institution, based on specific needs and objectives. It is not a “template” approach; it is structured for *your* school.

Technology-Enabled

SIFS is driven by learning requirements and then optimised for technology, platform, etc. Technology doesn't solve problems; people do. Technology helps people solve problems.

Vendor & Platform Agnostic

eVeltio is a consulting firm and does not have any products to sell. Therefore our services are unbiased and lean to ensure the best solution rather than a specific solution.

Independent Evaluation

eVeltio conducts its own evaluations and assessment of current state of the institution this ensures that an area of improvement is seen in an unbiased and independent manner.

SIFS has several components to it and an institution can engage for a turnkey project or specific, project-based assignments. SIFS covers:

- ▶ Strategic Intent - development, planning and roadmap implementation plan
- ▶ Professional development for teachers and staff, including continuous professional development (CPD)
- ▶ Process and workflow to ensure higher efficiencies in education delivery
- ▶ Technology, Tools and Resource planning for sustainability and effectiveness.
- ▶ Enterprise-wide distribution and logistic support structures to ensure smooth delivery of educational processes.
